## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Balassa et al.'813 (Balassa). Balassa discloses an excavation tooth and fastener assembly (figures 1-8), the assembly comprising an excavation tooth (figure 4A) having a tooth point 48 at one end and a tooth base 50 at an opposite end, upper and lower recesses in the tooth base and an upright opening joining the recesses (as seen in figure 4A). Also, Balassa discloses the assembly having a retaining pin (as seen in figures 2 and 4B), the pin including a wedge portion 12 and a stop member 10 having a lateral projection with an engageable surface at one end (either 18a or 18b) for abutting the vertical surface within the vertical opening and thereby limiting the insertion of the pin (as seen in figure 4B) and having a shank 14 at an opposite end (as seen in figure 1) configured for securable engagement by a suitable fastener (i.e., nut, 16), whereby the retaining pin is vertically insertable through the tooth and adaptor for securement therein by a fastener (column 3, line 60 to column 4, line 27). Further, Balassa shows the

Art Unit: 3671

assembly having surfaces sufficiently thick to protect the fastener 16 from shearing (as seen in figure 4B).

Regarding method claims 12-14, in view of the structure disclosed by Balassa, the method of installing the assembly would be inherent since it is the normal and logical means by which the assembly could be employed.
